## THE AIM

St. Andrews defines luxury living, blending premium care with a focus on residents' mental well-being. The home features cutting-edge, hotel-style amenities designed to enhance daily life, and promote independence. These thoughtfully crafted spaces create a warm, inviting environment for residents, visitors, and families, fostering a strong community spirit.

Morar Living's design approach reflects a commitment to delivering a 5-star experience. Every detail was carefully considered to ensure the home exudes elegance and comfort. This vision was expertly guided by Jenny Robertson, the home's talented interior designer, whose thoughtful expertise ensured unparalleled style and sophistication.

## THE SOLUTION

Jenny collaborated with danfloor to select the ideal flooring for key areas at St. Andrews. For the six luxury bedroom suites, clubhouse bar, and games room, she chose Origin from the Evolution Carpet Collection. Its plaid design blends tradition with a contemporary twist, adding warmth and sophistication while maintaining a modern edge. Origin perfectly complemented the home's luxurious, inviting atmosphere.

In the cinema room, Jenny chose Geo Form, whose geometric pattern added energy and created a striking focal point.

"As an interior designer, it's vital to choose flooring that meets aesthetic standards while addressing the care industry's needs," Jenny shared. "Danfloor offers thoughtfully designed patterns that ensure functionality, comfort, and style, creating safe, welcoming spaces for residents, staff, and visitors alike."

Morar Living also values danfloor's strong commitment to sustainability. The company's Eurofins and ISO certifications reflect its dedication to environmental responsibility, demonstrating that its products meet the highest environmental and sustainability standards.

St Andrews places the residents care, comfort, and wellbeing at the forefront of its mission. This commitment is shown in the thoughtful and sophisticated design, where every detail has been carefully chosen to foster a sense of tranquillity, security, and sophistication.

## THE OUTCOME

Morar Living is deeply committed to designing a home that encompasses luxury, comfort, and a true sense of homeliness. Since the installation of danfloor carpets in numerous locations, the home have noticed a massive improvement in the overall atmosphere. The carefully selected designs, combined with danfloor's focus on sustainability and performance, have improved the environment, contributing to a warmer, more ethical and inviting environment.

To help them achieve this our Collections offer the following key features:

- Extreme durability – The Evolution Collection boasts certification to British Standard classification 33, signifying its resilience for "Heavy Commercial Use." This accreditation ensures its capability to endure substantial foot and wheeled traffic, as well as withstand rigorous commercial cleaning procedures.
- Antimicrobial yarn treatment – The Evolution Collection features Bi-Ome®, an advanced permanent antimicrobial treatment specifically crafted to eliminate harmful bacteria, including those responsible for infections such as MRSA and C. Diff.
- Spill safe – All of the selected carpets have an integral protective membrane, preventing liquid spills from penetrating through to the subfloor, reducing contamination, fungal growth, and unpleasant odours.
- Naturally Sound absorbent – Danfloor carpets exhibit excellent sound absorption characteristics, surpassing a 28dB reduction in sound impact levels. This contributes to the establishment of a "therapeutic environment," fostering relaxation and effective communication for individuals within the space.
- Appearance Retention – Crafted from solution-dyed Nylon the Evolution Collection presents a colourfast system that locks in vibrant hues. This ensures exceptional colour and light-fastness, maintaining their brilliance even when exposed to rigorous cleaning chemicals.
- Reduction in fall injuries – In contrast to hard surface floors, carpeting has been shown to decrease injuries resulting from trips and falls. Research indicates that older individuals exhibit greater gait speed and step length when walking on carpeted surfaces compared to vinyl.
